Good morning,

The Pre-RD group is scheduled to complete retrieval and installation at three trap locations today. Global Diving has brought on a third diver to help perform installation and retrieval activities, utilizing one diver for each trap location. The crew plans to mobilize to ST07A (RM 16) this morning to retrieve sediment traps that could not be located yesterday afternoon. To overcome river velocities and station the vessels nearest to the sediment trap coordinates, the vessels will be anchored with heavier weights today. After the crew completes trap installation at ST07, the crew will mobilize to RM 11.8 (Transect 6).

Sediment collected yesterday will be processed at the AECOM warehouse this evening.

Jonni
